TENTRIS

JOB VACANCY

Senior / Principal Database Internals Engineer (f/m/d)

Storage & Transaction Engine

Why this is exciting

Build a database engine from scratch

No legacy code to maintain. You will design the storage and transaction engine behind TentrisDB from the ground up, built on our hypertrie: a generalized trie that stores all collation orders in a redundancy-eliminating DAG.

Solve hard problems at trillion scale

We target knowledge graphs with trillions of assertions. Many small, content-addressable subtries, deep pointer chasing, clever prefetching and tuned I/O queues: you will balance RAM pressure against NVMe I/O stalls.

Make versions first-class citizens

Massively parallel readers run alongside serialized writers under MVCC. Immutable graph versions power time-travel queries and data versioning. Bε-trees, LSM-trees or a hybrid: you measure and decide guided by the RUM conjecture.

Who you are

- Deep experience building or extending storage engines and database internals.
- Strong systems programming skills in C++ (Rust background welcome) with a feel for caches, memory and I/O.
- Solid grounding in concurrency control, MVCC and crash recovery.
- Data-driven: you benchmark, profile and measure before you decide.
- Own the architecture: you turn rough ideas into clear requirements, spell out roadmap consequences, break down work and review PRs.
- Team player: you build the storage engine with fellow engineers and co-design its interface with our worst-case optimal join (WCOJ) team.

Why Tentris

- Competitive salary, VSOPs and 30 vacation days
- Inspiring and supportive team that loves solving hard problems together
- Once-in-a-lifetime chance to build the core of a new graph database.
- Location: Cologne, hybrid (mostly remote possible, regular on-site days)

Diversity & Inclusion

Not sure you meet all requirements? Research shows great candidates from underrepresented groups often don't apply unless they tick every box. We hire for potential and diverse perspectives, not a perfect checklist. Women are especially welcome to apply.

If you love building things and turning fuzzy ideas into clear designs, let's talk.

Share your profile, motivation, work, or anything that shows why we want you.
